Section V.

1. The closest prior art is represented by document WO-A-98/26828 (cited at page 1). The subject-matter of claim 1 differs from that teaching (and the teaching of any of US-A-4 860 740, US-A-5 873 360, EP-A-1 172 122 and EP-A-0 525 720) in that:
a part of the wall of the chamber is formed as a deformable enclosure within which the container is received such that the at least one dispensing aperture is sealed and from which the container can be introduced into the chamber by pressure applied to the external surface of the deformable enclosure, the system being arranged such that when the container is introduced into the chamber the container is held stationary.
- 1.1 None of the available prior art documents discloses a deformable enclosure of the device chamber providing a seal of the container in the non usage status and which allows for the container to be stationary introduced into the chamber.
- 1.2 Such a device is an alternative solution to the known devices which provides for easy operation and a possible less audible powder administration in comparison with the devices having rotational capsules. The advantage of that the container is held stationary within the chamber minimizes the risk of powder loss due to device shaking.
- 1.3 Claim 1 therefore fulfils the requirements of Article 33(2)-(3) PCT.
2. Claims 2-20 are dependent claims defining preferred embodiments of the system of claim 1.
3. Claims 1-20 therefore fulfil the requirements of Article 33(2)-(4) PCT.
